Modelos Probabilísticos (EYP1027) Ayudantía 8

Camilo González Rojas

1. Si X tiene una densidad $f_X(x)$ e Y es independiente de X y tiene una densidad $f_Y(y)$, establezca formulas similares a las de la convolución para la variable aleatoria Zen cada caso.

$$a) Z = X - Y$$

b)
$$Z = XY$$

c)
$$Z = X/Y$$

- 2. Suponga que \bar{X} y S^2 son calculados de una muestra aleatoria X_1,\ldots,X_n con varianza finita σ^2 . Sabemos que $ES^2=\sigma^2$. Pruebe que $ES\leq\sigma$,.
- 3. Sea $U_i, i = 1, 2, \ldots$, variables aleatorias independientes uniformes (0,1), y sea X con distribución

$$P(X = x) = \frac{c}{x!}, \quad x = 1, 2, 3, \dots$$

donde c = 1/(e-1). Encuentre la distribución de

$$Z = \min \{U_1, \dots, U_X\}.$$
